

A study at BRIMS hospital for comparing the tolerability of Cilnidipine and Amlodipine in the treatment of hypertension

Preeti Dharpur et.al; Indian Journal of Pharmacy and Pharmacology, January-March, 2019; 6(1):11-13

- This study was conducted to assess the tolerability of Cilnidipine and Amlodipine in patients of hypertensive.
- 100 newly diagnosed mild and moderate hypertensive patients of either sex aged between 18-60yrs were included. ADR were noted and compared.
- On comparison of ADRs between Cilnidipine and Amlodipine it is clear that Amlodipine has more ADRs than Cilnidipine. The Comparison of pedal edema between both the groups show a Statistical Significance.

Cilnidipine seems to be better than Amlodipine in the management of the hypertensive patients.
